

101F Vacuum Tube

Classification

The No. 101F Vacuum Tube is a three-element filamentary type tube for use where small amounts of output power are required.

Base and Socket

The No. 101F Vacuum Tube employs a four-prong bayonet pin type base suitable for use in a Western Electric No. 100L (front panel mounting), No. 100R (rear panel mounting), or similar type socket.

Average Static Characteristics

The accompanying curves give the average static characteristics of the No. 101F Vacuum Tube.

General Features

The No. 101F Vacuum Tube was designed for use where a very long life is essential. This makes it particularly suitable for applications where continuous service is desired. The microphonic response of this tube is low.

The electrical characteristics are such that moderate power outputs are obtainable with small plate currents and with plate voltage under 200 volts.

The characteristics are similar to those of the No. 101D, however, the No. 101F operates at a filament current of 0.5 instead of 1.0 ampere.
