15AF11 Compactron Dissimilar-Double-Triode Pentode. The 15AF11 is a compactron containing a high-mu triode, a medium-mu triode, and a sharp-cutoff pentode. The high-mu triode is intended for AGC keyer service, the medium-mu triode for sync separator service, and the pentode for video amplifier service.

Except for heater characteristics and ratings, the 15AF11 is identical to the 6AF11.

GENERAL

ELECTRICAL

Cathode - Coated Unipotential

Heater Characteristics and Ratings

Heater Voltage, AC or DC*	14.7	Volts
Heater Current●	0.45 ± 0.03	Amperes
Heater Warm-up Time, Average■	11	Seconds

15BD11-A Compactron Dissimilar-Double-Triode Pentode. The 15BD11-A is a compactron containing a high-mu triode, a medium-mu triode, and a sharp-cutoff pentode. The high-mu triode is intended for general-purpose use, the medium-mu triode for sync separator service, and the pentode for video amplifier service.

Except for heater characteristics and ratings, and a higher screen dissipation rating, the 15BD11-A is identical to the 6BD11.

GENERAL

ELECTRICAL

Cathode - Coated Unipotential

Heater Characteristics and Ratings

Heater Voltage, AC or DC*	14.7	Volts
Heater Current●	0.45 ± 0.03	Amperes
Heater Warm-up Time, Average■	11	Seconds

MAXIMUM RATINGS

DESIGN-MAXIMUM VALUES

Pentode Section

Screen Dissipation	1.5	Watts
--------------------	-----	-------

15FM7 Compactron Dissimilar Double Triode. The 15FM7 is a compactron dissimilar double triode designed for use as a combined vertical-deflection oscillator and amplifier in television receivers.

Except for heater characteristics and ratings, the 15FM7 is identical to the 6FM7.

GENERAL

ELECTRICAL

Cathode - Coated Unipotential

Heater Characteristics and Ratings

Heater Voltage, AC or DC*	14.8	Volts
Heater Current●	0.45 ± 0.03	Amperes
Heater Warm-up Time, Average■	11	Seconds

The tubes and arrangements disclosed herein may be covered by patents of General Electric Company or others. Neither the disclosure of any information herein nor the sale of tubes by General Electric Company conveys any license under patent claims covering combinations of tubes with other devices or elements. In the absence of an

express written agreement to the contrary, General Electric Company assumes no liability for patent infringement arising out of any use of the tubes with other devices or elements by any purchaser of tubes or others.

15FY7 Compactron Dissimilar Double Triode. The 15FY7 is a compactron dissimilar double triode designed for use as a combined vertical-deflection oscillator and amplifier in television receivers.

Except for heater characteristics and ratings, the 15FY7 is identical to the 6FY7.

GENERAL

ELECTRICAL

Cathode - Coated Unipotential

Heater Characteristics and Ratings

Heater Voltage, AC or DC*	14.7	Volts
Heater Current■	0.45 ± 0.03	Amperes
Heater Warm-up Time, Average■	11	Seconds

NOTES

- * Heater voltage for a bogey tube at $I_f = 0.45$ amperes.
- The equipment designer should design the equipment so that heater current is centered at the specified bogey value, with heater supply variations restricted to maintain heater current within the specified tolerance.
- The time required for the voltage across the heater to reach 80 percent of the bogey value after applying 4 times the bogey heater voltage to a circuit consisting of the tube heater in series with a resistance equal to 3 times the bogey heater voltage divided by the bogey heater current.
